

Allison Hall

Mesa, Arizona

Since our school has begun a 1:1 iPad program this year, we have found that even with our E-Rate improvements we still do not have enough broadband to adequately enable students and teachers to use their devices reliably. With our network team we have found that by simply having students search the internet, download an app or watch a short video clip we are saturating our broadband capacity. Increasing E-Rate funding would help to ease the cost for increasing broadband capabilities thus improving the education of all students. Delays in wireless capabilities equate to delays in learning.
